

Bartender software for label and tag printing.

BARTENDER

The Bartender Software is the perfect product to print labels and tags autonomously. Users can generate a wide range of labels, without managing a large number of individual documents. Allowing data import from databases, optimizes and speeds up production, with easy management of text, graphics, barcode, numerators, serial numbers, expiration date.

COD: BARTENDER
PLURISERVICE CODE VSSWCZ002

DESCRIPTION

OPTIMIZES YOUR LABEL PRODUCTION. The Bartender software is a necessary product for companies in need of improving efficiency, compliance and label production management. This innovative and intuitive software is the label printing package market leader, both on thermal and laser/ink jet printers, allowing to perfect label design and automatically print them. This software prints via Windows drivers ; object graphic management is simplified, and text can be sized by compression. It is a very versatile software, handling all barcode types, both 1D and 2D (Qr codes) and also generating GS1-128 codes (to identify country, company and product). This amazing package imports data from external databases, optimizing and speeding up label and tag production. The Enterprise and Automation versions cover all company needs, including RFID printing/encoding and business network print management.
