

E2K COLLECT ENTERPRISE

Data Collection Software

E2K Collect Enterprise is the advanced version of our E2K Collect PE software, designed for more complex business structures. It is Storm Open Solutions' general-purpose data collection software.

E2K Collect Enterprise is compatible with Android devices and is built for companies that perform daily readings and need to manage multiple terminals simultaneously with diverse functions. This is possible because E2K Collect Enterprise can program your terminals according to your specific needs—such as data collection, picking, serial number management, SQL Server data exchange, and much more.

DESCRIPTION

When it comes to managing data collection on Android devices, E2K Collect Enterprise by Storm Open Solutions stands out as the ideal choice for companies seeking advanced and comprehensive software. Here are some of the reasons why you should consider this solution:

- Easy and Precise Validation via multiple modes (data type, REXP, pre-loaded database, JavaScript)
- Multi-language Support for a global audience
- PC-Assisted Configuration
- SQL Server Data Exchange
- Communication Managed via Windows service
- Additional Features such as picking and serial number requests
- Multiple Configurations selectable on the fly
- Quick Initial Setup via QR-Code

ONE APPLICATION, DIFFERENT TERMINALS

We understand the challenges companies face in data collection on Android devices. Management complexity, the risk of human error, terminal configuration, interoperability with existing systems, the need for professional support, data security, and operational efficiency are all pain points that we at Pluriservice address.

As an Italian leader in the automatic identification sector—with decades of experience in data collection issues combined with deep technical know-how—we
