DESCRIPTION

The result of years of field experience and developed in close collaboration with industry professionals, E2K Food is a flexible and configurable enterprise package. Its modular structure allows you to activate only the necessary functions while maintaining a consistent interface that accelerates the learning curve.

The software covers the entire operational cycle:

- Floor and Order Management: Real-time monitoring of table status, management of kitchen brigades, and tracking of course advancement.

- Mobility: With E2K Food Mobile, orders can be taken directly at the table using Android, Windows Mobile, or Orderman devices, with real-time dish availability verification.

- Billing Flexibility: Supports separate checks, "Dutch treat" (alla romana), pro-forma invoices, and various payment methods including cash, cards, and credit.

- Control and Security: Advanced operator profiling and detailed statistics provide informed decision-making to improve business profitability.

E2K Food integrates seamlessly with existing hardware, supporting major cash registers, fiscal printers, barcode scanners, and POS payment terminals like Jusp and Ingenico.

TECHNICAL SPECIFICATIONS

- Enterprise Technology: Built on Microsoft SQL Server for maximum data security and Crystal Reports for professional reporting.

- Touch-Oriented Interface: Fully customizable graphics optimized for all-in-one computers without the need for a keyboard or mouse.

- Multilingual Support: Available in Italian, English, French, and German.

- Peripheral Support: Compatible with Windows-driven printers, barcode scanners for course tracking, and chip-card/transponder readers for electronic payments.

- Optional Modules: Includes warehouse and stock management, takeaway, meal vouchers (including digital dematerialization via BuonoChiaro), and Wi-Fi hotspot management.

- Minimum Requirements: Intel 3.2 GHz processor or higher, 2 GB RAM (4 GB recommended), and Windows XP or higher.
